

## General Chemistry Laboratory

General Chemistry Laboratory is a one credit hour lab course that is designed to train junior chemistry students on some essential lab techniques that will serve them well in the future. Students will perform a series of experiments; each will give the student a deeper insight on a major concept that has been taught in the general chemistry class.

Students are expected to:

- Adhere to the lab safety rules
- Perform the experiments in a scientific manner
- Present the results in an easy and understandable way
