## **19 Course Description:**

As stated in the approved study plan.

Radiation sources, interactions and energy deposition by ionizing radiation in matter; concepts, quantities and units in radiation physics. Isotope production, measurement of activity, standards, Spectrometry, measurement techniques and detectors. Precision, errors, detection limits. Radioanalytical methods. Principles and methods of radiation dosimetry. Radiation detection instrumentation.

#### 20 Course aims and outcomes:

A - Aims: Understanding the fundamental of radiation physics including the production of ionizing radiation and its interaction with matter as well as discussing topics in radiation dosimetry, instrumentation, applications and radiation protection.

#### **B** - Students Learning Outcomes (SLOs):

**SLO** (1) Identify radiation types, production and sources, explaining the nature of ionizing radiation and how it is measured and monitored.

**SLO (2)** Understand cell biology and the effects of radiation on it. Recognize molecular and cellular radiation biology, identifying early and late radiation effect and how it can relate to genetics.

 $SLO~(3)~{\rm Describe}~{\rm radiation}~{\rm energy}~{\rm transfer},~{\rm radiation}~{\rm effects},~{\rm and}~{\rm radio}~{\rm sensitivity}~{\rm and}~{\rm response}.$ 

**SLO** (4) Define dose limits, equipment design, and management of radiation dose. Along with the units, detection and measurement of radiation.

**SLO (5)** Understand the need and objectives of a radiation protection plan and radiation safety.

SLO (6) Understand the application of radiation in medicine and industry.
